

## Week 2. Homework #2

**Topic:** Components and Props

### Assignment description:

1. Create a separate component `UserCard` that accepts a user's name and email via `props`.
2. In `App`, create an array of 3–4 user objects.
3. Use the `.map()` method to display the list of users with `UserCard`.
4. Add a `Button` component that accepts text via `props` and renders a button.
5. Style the project with CSS (e.g., make user cards).

### Submission instructions:

- Upload the full project to **GitHub** (repository must be public or accessible).
- Submit the GitHub link in **oqulabs.kz**.
- Record or show a screen demonstration of the user list and how `props` work.
- Using AI without understanding the code will lower your grade.

### Grading structure (100%):

- Implementation of `UserCard` and usage of `props` – 40%
- Displaying users with `.map()` – 30%
- Creating and using `Button` with `props` – 20%
- Submission via GitHub + oqulabs.kz + screen demo – 10%
